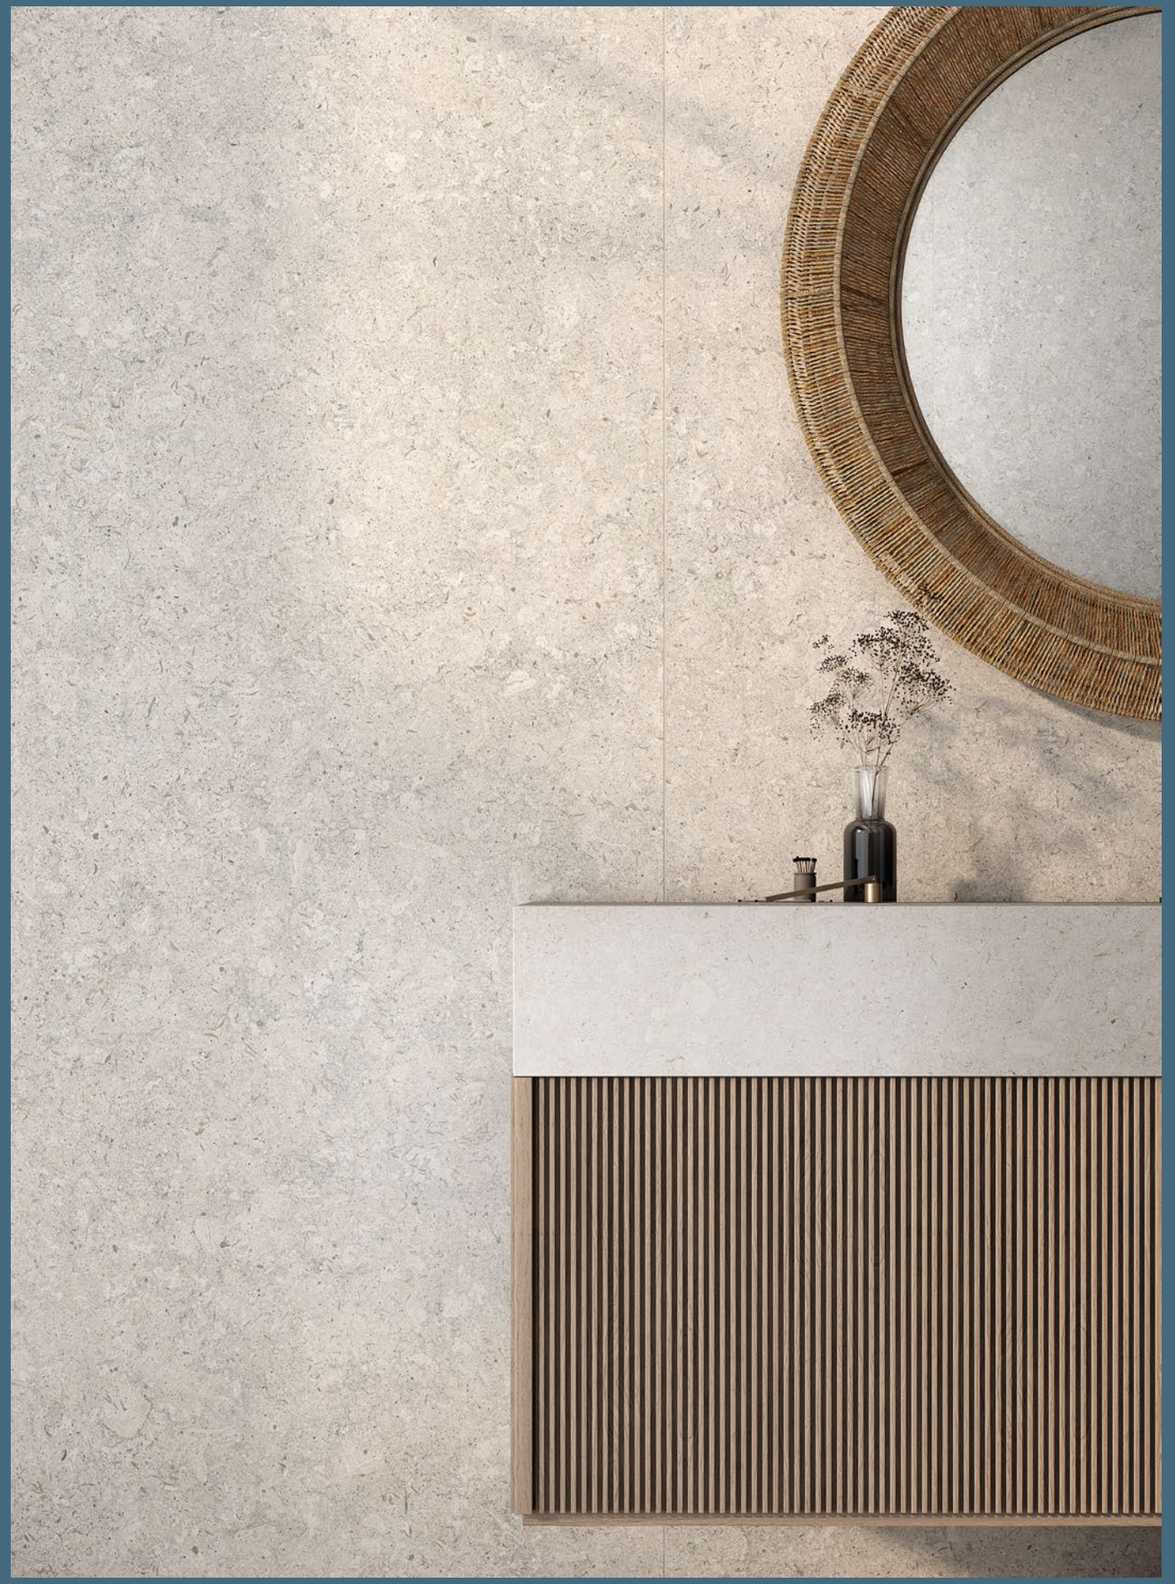
Certifications and Warranty

Beauty lives in every detail.

Dekton defines a universe where the beauty of details and high performance come together.

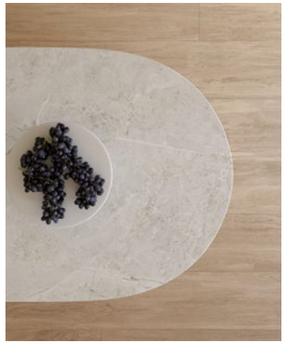
Nature is the starting point, but not the limit: Dekton reinterprets it, and its technology reshapes it into patterns and structures that give form to the material. The result is an ultra-compact surface designed for architecture and interior design, with features capable of sustaining its beauty over time.

This universe unfolds through its collections, all united by the same idea: Beauty lives in every detail.



Dekton.
The Ultracompact Surface

Dekton by Cosentino is the large-format surface manufactured through an innovative process of ultra-compaction and particle fusion. A technical surface with extreme resistance and great versatility, perfect for use in exterior architecture, interior design, and furniture.



Maximum performance in any application

- → High heat resistance: you can place hot pots and pans directly on the surface.
- → Superior hardness and scratch resistance.
- → Low porosity: does not absorb liquids or stains.
- → Outdoor stability: also ideal for outdoor kitchens and barbecues, façades, and terrace flooring.
- → Sophisticated and complex designs with unique veining and textures.

Dekton is ideal for:

- → Kitchen countertops
- → Furniture
- → Wall cladding in bathrooms and showers
- → Indoor and outdoor flooring
- → Façades
- → Interior design projects
- → Highly demanding architecture

Dekton Features

Large format

Thanks to its size (up to 326 × 146 cm) and lightness (starting from 4 mm thickness), the design possibilities offered by Dekton for kitchens, bathrooms, façades, walls, or high-traffic surfaces are increasingly greater.

Standard large format
320 × 144 cm

Jumbo format
330 × 163 cm

Available thicknesses
4*, 8, 12, 20 and 30** mm

High resistance

Extremely scratch-resistant, with virtually zero porosity and highly resistant to aggressive chemicals commonly used in kitchens and bathrooms.

Unyielding to heat

Highly resistant to high temperatures, such as those from utensils freshly removed from the fire or hair straighteners, and to UV rays.

Limitless inspiration

Design your kitchen and bathroom with appealing colors and unique textures. Large format for new creative solutions.

A countertop to be enjoyed

Easy maintenance, no trace of fingerprints or other marks and with maximum durability. Your Dekton surface comes with a 25-year warranty.

* Check availability for the 4 mm thickness, suitable only for cladding.
** Check availability for the 30 mm thickness.

Dekton Advantages

High resistance to UV rays

Scratch resistance

Stain resistance

Maximum resistance to fire and heat

Abrasion resistance

Heat/thaw cycle resistance

Superior mechanical performance

Low liquid absorption

Dimensional stability

Non-combustible material

High resistance to hydrolysis

We calculate, verify, and offset our carbon footprint throughout the entire lifecycle.

1. We reduce our impact

ENERGY EFFICIENCY

Reducing energy consumption during the production process and the group's overall activities is a priority for Cosentino.

Moreover, 100% of the electricity used in our production process comes from renewable sources.

EMISSION REDUCTION

We have invested 2.8 million euros in implementing an energy management and control system for thermal systems, which allows heat recovery from Dekton ovens to be reused in drying processes, thereby reducing emissions.

SUSTAINABLE MOBILITY

Our mobility policy includes installing chargers for 100% renewable electricity for electric vehicles, encouraging their use among employees, and providing hybrid buses to facilitate transportation of employees and visitors from nearby points to the facilities.

2. We calculate our carbon footprint

As part of our decarbonization plan, our carbon footprint is calculated and verified by an accredited external organization.

It is endorsed by the Ministry for Ecological Transition and Demographic Challenge and is part of the Carbon Footprint, Compensation, and Absorption Projects Registry of the Spanish Office for Climate Change (OECC).

For this calculation, we use data related to energy and fuel consumption, raw materials, and the entire value chain across the different Cosentino Group centers (Centers, Workshops, Cities, Distribution Hubs, Headquarters...).

3. We offset our emissions

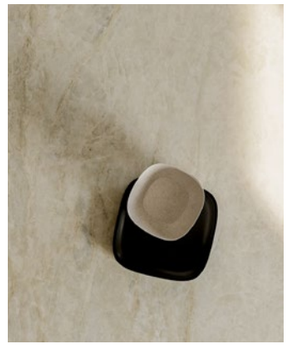
Dekton's carbon footprint has been calculated and verified considering its entire lifecycle (from cradle to grave). Cosentino offsets its emissions throughout the entire product life cycle (Scopes 1+2+3) by investing in greenhouse gas (GHG) emission offset projects.

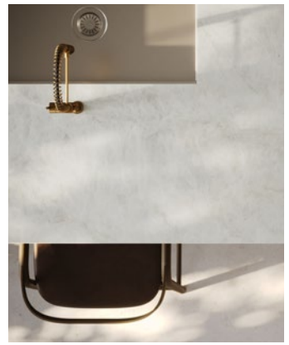
Associated emissions that could not be avoided or reduced through decarbonisation measures are managed through a combination of regulated emission allowances and the purchase of carbon credits from climate projects certified under the Verified Carbon Standard (VCS) by Verra, as part of the company's climate strategy.

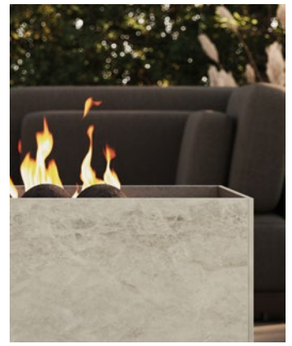
To this end, we identify projects that meet responsible offset criteria and also have a strong social dimension contributing to the achievement of the UN's 2030 Agenda for Sustainable Development Goals.

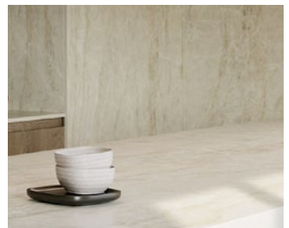
LATEST NEWS

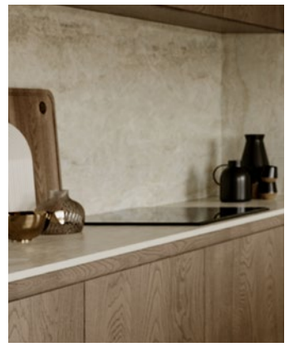
Dekton Nara

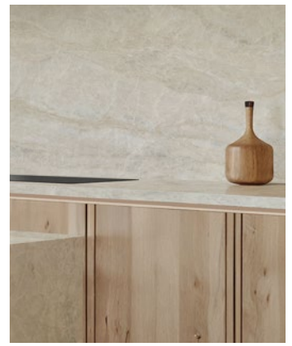












Inspired by the serene beauty of nature.

Nara combines the warmth of beige tones with a soft and enveloping design. Its subtle veining, set against a luminous background, offers a contemporary reinterpretation of the timeless elegance of Taj Mahal quartzite. Its silky finish enhances its calm and sophisticated character, inviting touch with a texture that conveys harmony. A balanced and versatile proposal, ideal for spaces seeking a touch of sophistication.

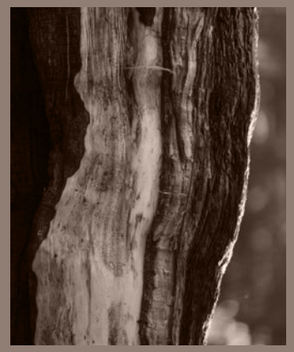
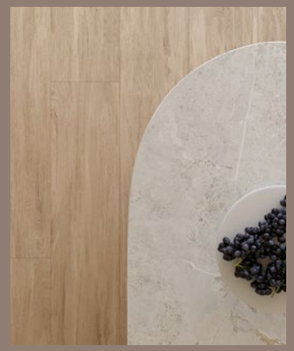
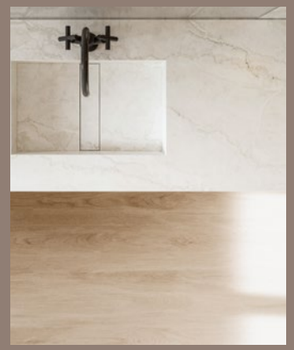
AMAZONIK
Natural beauty.







It’s not wood.
It’s Dekton.

Dekton technology transforms wood details into patterns and textures that retain its warmth and character, but with Dekton’s performance, offering color stability, very low porosity, and high resistance to scratches and impacts.

Compared to wood, Amazonik is designed to endure demanding uses—wet areas, outdoor spaces, work surfaces, and high-traffic areas—without varnishes, oils, or periodic treatments.

The collection is available in two tones: Kedar, more intense and characterful, and Zira, lighter and brighter. Suitable for countertops, cladding, and flooring (including plank format), it combines natural beauty and performance for both interior and exterior spaces.

As an ultra-compact surface with very low porosity, it reduces absorption and facilitates cleaning and maintenance. Its UV stability and wear resistance help preserve its appearance over time.

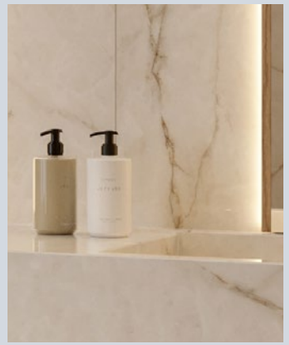
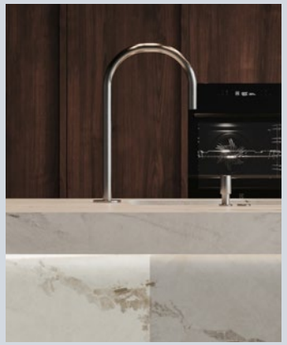
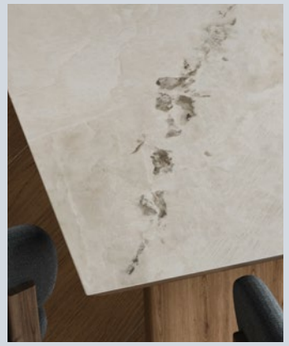
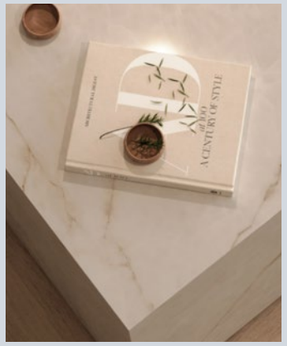
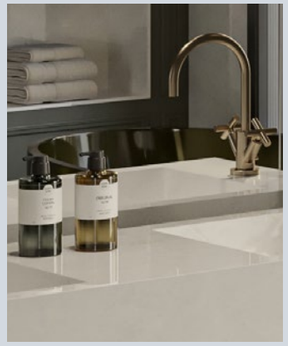
ARTIK NODES
Frozen beauty.











Depth from within.
Dekton goes beyond.

Artik Nodes reinterprets the visual strength of quartzite through Dekton technology to capture an Arctic moment: the ice fracture, when patterns intersect at nodes. The result is a collection with great visual depth, where tones and textures reveal internal layers, offering transparency and relief on its surface.

In architectural and interior design projects, Artik Nodes introduces a more expressive language of large surfaces designed for cladding or countertops, providing contrast and a sophisticated presence. The palette, inspired by fragile quartzites, precisely controls light and adds selective points of brightness that enhance the design and amplify the sense of depth.

As an ultra-compact surface, Dekton makes this material richness possible, ensuring reliability in the most demanding applications: stability and durability for interior and exterior, maintaining its appearance over time. A collection where detail becomes structure.

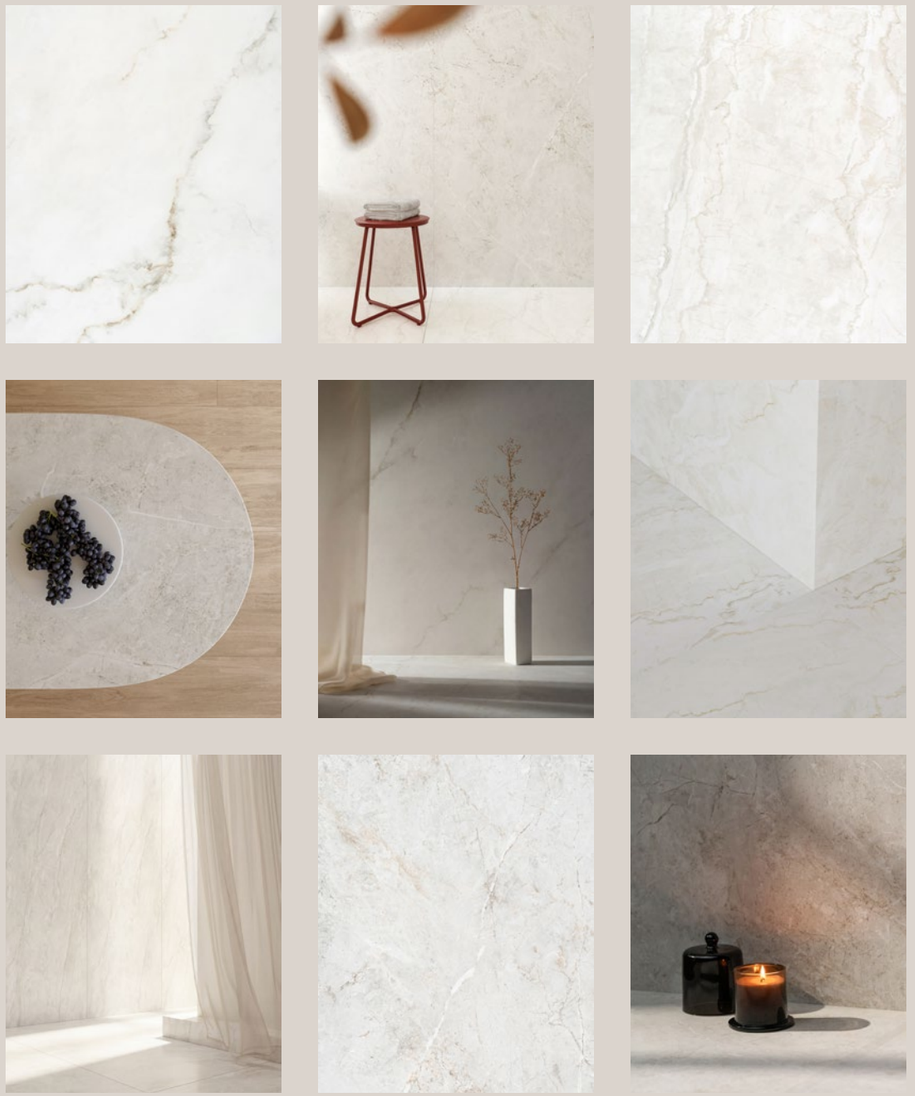
NOMAK
Serene beauty.



Visual continuity.
Timeless design.

Nomak spans a palette of soft greys and ash tones with greater architectural presence, to brighter whites that enhance the clarity of the space. Designed for large surfaces—cladding, flooring and countertops—when seeking a clean, natural and timeless base. Subtle colors that maximise natural light and create a clean, timeless and harmonious visual environment.

Dekton ensures that balance is maintained over time: a stable, easy-to-maintain base that preserves the purity of tone and the cleanliness of the ensemble in daily use. A collection designed for spaces where design is based on essentials.

Dekton Kitchens

Precision and high performance for the kitchen

Dekton opens a new vision in the kitchen through surfaces of great visual beauty, high resistance and wide application versatility. Its large formats, variety of thicknesses and high technical performance allow for cleaner, more coherent spaces ready to meet the demands of daily life in the kitchen.

Dekton Kitchens

Beauty with character

With a wide variety of colors, veins, neutral tones, and finishes, Dekton allows the creation of kitchens with a contemporary, elegant, and well-defined aesthetic. A surface designed to enhance the identity of the space and add visual value to the whole.

Multiple formats and possibilities

Large formats and a variety of thicknesses allow for countertops, islands, fronts, and cladding with fewer joints and a greater sense of visual order. The result is a cleaner, more uniform kitchen with a more refined presence.

High performance for everyday use

Dekton is designed to withstand the typical conditions of the kitchen thanks to its resistance to heat, scratches, abrasion, and wear. A durable solution that maintains its performance and appearance over time.

Easy maintenance, maximum practicality

Its very low porosity helps prevent liquid absorption and makes cleaning with regular products easier. A key advantage for keeping the surface in perfect condition and simplifying the daily maintenance of the kitchen.

Also for outdoor use

Dekton’s resistance to UV radiation and various weather conditions allows for extending the same material language to outdoor spaces, maintaining color, stability, and performance over time.

COUNTERTOP, KITCHEN CLADDING AND ISLAND COUNTERTOP DEKTON MARMORIO

Kitchen countertops

Dekton is a product designed to create unique spaces like the kitchen and to enjoy them long-term without limitations.

It is a clean surface, pleasant to the touch, and resistant to daily wear over time. A uniform surface that can be installed in a single piece, minimising cuts and joints.

Thanks to its properties, it can perfectly adapt to very different design styles.

A combination of beauty and solidity with easy and hassle-free cleaning. Dekton’s structural density represents a major engineering breakthrough, but its resistance to scratches, stains, or heat marks is what truly makes the difference in a space like the kitchen.

KITCHEN ISLAND, COUNTERTOP AND FLOORING DEKTON LUNAR

Kitchen flooring and cladding

Visual continuity throughout the space. Floors, walls, and furniture clad in the same surface, which, thanks to its large format and almost zero expansion coefficient, allows for installation with fewer joints that are practically imperceptible.

Outdoor kitchens

Cooking is undoubtedly a very pleasant experience, and when done outdoors, it often becomes a small social event. Everyday celebrations that can be enjoyed in company around a grill. Thanks to its ultra-compact structure, Dekton is a material especially suitable for outdoor kitchens and barbecues.

Dekton brings solidity and style to these spaces, giving them undeniable personality and limitless functionality. Stains, impacts, high-temperature utensils... Dekton will withstand demanding use over time while its beauty remains unchanged.

It is also unaffected by ice, sun, or wind. All Dekton needs in bad weather is a simple cleaning to return to its best appearance.

Dekton Bathrooms

Continuity and durability for a contemporary bathroom

Dekton transforms the bathroom space into a cleaner, more sophisticated, and durable architectural proposal. Thanks to its advanced technology and the versatility of its large formats, it allows for the creation of environments with visual continuity and high resistance and a design refined down to the last detail. A solution designed for projects seeking aesthetics, functionality, and performance in a single material.

Dekton Bathrooms

Custom surfaces for every project

Dekton adapts to multiple bathroom configurations thanks to its custom manufacturing. Countertops, cladding, fronts, niches, or shower trays can be designed with precision to meet the aesthetic and functional needs of each space.

High performance in wet areas

Its very low water absorption and high resistance to daily use make Dekton an ideal solution for bathrooms.
A material designed to withstand humidity, temperature changes, and intensive routines while maintaining its appearance over time.

Visual continuity. More design, fewer grout lines

Dekton's large formats allow for the design of cleaner and more elegant spaces, reducing visible joints and enhancing the sense of spaciousness. The result is a more harmonious bathroom with a contemporary aesthetic and a much cleaner visual impression.

Integrated countertops and sinks

Dekton allows for the creation of sink areas with a solid and architectural look. Combined with integrated or countertop solutions, it provides aesthetic coherence and a surface that is durable, easy to maintain, and ready for daily use.

Cladding and flooring with character

From walls to floors, Dekton offers a uniform solution to dress the bathroom with materials of great visual richness. Its variety of designs, thicknesses, and finishes allows for proposals ranging from minimalist to expressive, always with high performance.

Shower trays with total integration

Dekton shower trays promote a continuous and contemporary aesthetic, naturally integrating into the overall bathroom design. A solution that combines design, customisation, and functionality for residential, hotel, or contract projects.

Bathroom countertops

Long-lasting beauty for daily use.

The bathroom is a constantly used space that requires materials capable of maintaining their appearance over time. Thanks to its low porosity, Dekton offers a surface resistant to humidity, stains, and common personal hygiene products.

Its maintenance is simple, and its appearance remains unchanged even in environments continuously exposed to water. Additionally, the wide variety of colors and finishes allows for the creation of spaces that adapt to any design style.

A combination of aesthetics, functionality, and durability for bathroom countertops designed to last.

Bathroom flooring and cladding

Visual continuity throughout the space.

Dekton’s large formats allow for flooring and wall cladding with a uniform and elegant aesthetic, reducing the number of visible joints and enhancing the sense of spaciousness and visual cleanliness.

Its resistance to humidity and dimensional stability make it an ideal solution for creating coherent and durable bathroom spaces. The wide variety of designs, colors, and textures facilitates the creation of environments ranging from the most serene and minimalist to the most sophisticated and expressive.

A versatile surface that provides continuity, design, and technical performance to the entire space.

Dekton Grip+

Bathrooms, pools, or outdoor flooring. The innovative Grip+ treatment guarantees anti-slip properties in Dekton, providing maximum safety in flooring while meeting the most stringent international standards for high-traffic areas.

A durable and resistant anti-slip treatment applied in a controlled manner during Dekton's manufacturing process, eliminating the need for chemical or mechanical methods.

The tones of the anti-slip finish may show slight color differences compared to the standard matt finish. These are more noticeable in colors like Danae.
